

# Headley Park Civilian Service Rifle (CSR)

If you need any more information regarding  
CSR at HPR&PC, please contact  
[csr.hprpc@gmail.com](mailto:csr.hprpc@gmail.com)

## About CSR :

CSR is a Range-Officer controlled turning-target discipline shot “shoulder to shoulder” at standard NRA targets, decreasing in distance from 100 yds.

CSR is run on the third Sunday of the month on the 100 yrd range, from 13:00 until range closing time. Due to the shooting style of CSR, there is no need to be on the range at 13:00, coming along later is not a problem.

### Celeritas et Diligentia :

The question is, can you get the correct number of accurate shots off in a prescribed time before the target turns away?

## Equipment :

Most CSR shooters use 22LR or 300 Blackout calibre rifles in semi-automatic, straight pull or bolt-action guise, however any range certificate compliant firearm +/- ammo combination with Iron sights or Optics could be used. A minimum 10x shot magazine is preferable, however the course of fire can easily be adapted for lesser capacity firearms... Full webbing kit is optional but you may get style points..

# What do you do? :

A couple of new commands are introduced to many shooters for the first time at CSR, these are:  
“watch-out” :- targets are about to turn  
“make safe” :- empty chamber, bolt forward, safety catch engaged and loaded magazine inserted  
...these are ‘like’ “stand-by” and “load option-2” in IPSC shooting.

Starting from the 100yrd firing point with rifles “made safe” a target, which starts ‘turned away’ is turned facing towards the shooter and is engaged with 10 rounds from a supported standing position. After the prescribed time, the targets turn away. The range officer checks all chambers are empty and then all rifles are “made safe”.

2

Again after whole the squad is then “made safe” it advances under RO control to 50yds where the first “Huns head” is turned to face the shooter and engaged with 10 rounds kneeling or standing.

4

Some of the standard NRA targets used for CSR.

Clearing away is simple just a small amount of furniture to be returned to the 100yrd Firing Point and the targets, control cables and battery returned to the maintenance shed.

1

Only when the whole squad are “made safe”, the squad under RO control advances to 75yds where a second target is turned to face the shooter and engaged with 10 rounds kneeling from behind a barricade.

3

The squad is then “made safe” and under RO control advances to 25yds where a second “Huns head” is turned to face the shooter and is engaged with 10 rounds standing. The RO then clears all the rifles which are flagged or bagged and the scoring and excuse giving can start.

CSR can be shot as a team event with a bolt-action and semi-auto in a ‘squad’, the annual R.J. “Helicopter and Pick-up” challenge is one such event, as is the Firing Solutions “Balti” challenge.
